

FastTrack

Slip-resistant platform surfacing

FastTrack

SLIP RESISTANT PLATFORM SURFACING

FastTrack is the specialist solution for safe, cleanable, non-slip railway platforms - providing long-lasting performance for the most heavily trafficked areas and suitable for both covered and exposed platforms.

Highly durable, the FastTrack system comprises three components including platform surfacing, TrackTile blister units for edge demarcation and coloured text / platform marking. These components are fully inter-compatible and build up to create a complete yet flexible design system.

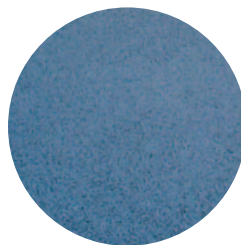

Applications

Tested and approved by London Underground, FastTrack may be used on underground and mainline stations, together with bus and tram platforms wherever a slip-resistant, cleanable surface is required to comply with statutory safety requirements or for additional functionality or demarcation. FastTrack provides a fully waterproof surface that can be easily applied over a wide range of existing substrates, accommodating cracks and surface irregularities and is sufficiently flexible to withstand movement and vibration once installed. FastTrack can be applied with minimum traffic disruption and can be walked on just one hour after installation.

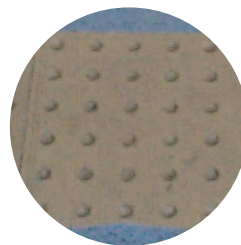

Features and benefits

- Full tested and approved by London Underground
- Waterproof and slip-resistant
- Coloured platform marking options - text or graphics
- Blister-faced tiles for tactile surfacing at platform edge
- Extremely resistant to wear
- Rapid curing - walk on in 1 hour
- Easily cleanable, including chewing gum
- Stabilises friable sub-surfaces
- Withstands vibration and movement without cracking
- Complementary range of cleaning products available
- Installed by fully trained operators
- Technical and specification advice available

FastTrack is a complete, slip resistant solution for platform edging

Substrate

Kemperol
Primer

Surfacing

FastTrack slip-resistant surfacing may be installed over existing tarmac, paving or cementitious materials. A primer is first applied to the substrate, followed by a polyester reinforcement fleece impregnated with Kemperol AC resin and finally a wearing course of kiln-dried coloured aggregate, sealed with a clear UV-resistant topcoat. FastTrack can accommodate existing platform furniture, which is neatly integrated within the system following simple preparation.

The finished, non-slip surface may be walked on after just one hour.

TrackTile (blister tiles)

TrackTile provides an easily installed tactile surface that conforms to safety requirements for the visually impaired. The tiles are applied in conjunction with FastTrack surfacing, giving a fully integrated system that is fully waterproof and can be easily cleaned.

Platform Marking

FastTrack platform marking allows indelible text or graphics to be incorporated within the platform to provide signage, hazard warning or delineation. It can be specified in a wide range of colours and as an integral part of the system is highly durable, slip resistant and easily cleanable.

Technical Support

We offer a comprehensive advisory service on all projects from design through to completion. Contact us at an early stage with details of the project or application and we will advise on the most appropriate and cost-effective FastTrack product to meet your design and performance requirements. Detailed written recommendations for preparation and treatment will be supplied where needed.

Installation and Service

All FastTrack products are installed by fully-trained, independent contractors covering the whole of the UK. Site visits are undertaken as necessary to confirm product selection and to help ensure a totally dependable solution whilst additional on-site training will be arranged where special treatment might be required. This personalised service, the option of a choice of FastTrack products and our ability to provide bespoke performance solutions for specific applications means users are assured of a more durable, long-lasting and reliable system.
